

Benefits of a **Steam** Cleaning System

Fast - Effective - Thorough

Few people enjoy cleaning, but like eating or bathing, it is something that is necessary for good health and social survival. Now with the Vapor System you not only save time but deep clean as you surface clean. It takes less effort and less time to do the job right the first time. The visibly superior result speaks for itself!

3-Way Action, One Process

With the Vapor System, you clean, sanitize and deodorize all at the same time and leave no chemical residue which may affect food or be detrimental to the surfaces you are cleaning. The hot vapor penetrates even the pores of the materials cleaned and at the same time destroys mold spores, bacteria, viruses and germs of all kinds. Heat is the single, most effective, tested and proven sanitizing agent known to man.

100% Environmentally Safe

Using only potable water raised to a temperature in excess of 300° F and distilled as you use it, our system does not use any chemicals, suspect solvents, cancer-causing chlorine, germicides, pesticides or herbicides to get the job done. Therefore, it's safer to use, simpler to use and does not introduce toxic substances into our homes and businesses. Detrimental effects of long term exposure to many household or commercial cleaning chemicals and their associated waste are only now beginning to be understood. Only a steam cleaning system eliminates this harmful potential. Why take chances with your health, your most precious asset!

The Number 1 Germ Killer In The World

Heat, in the form of steam vapor, has long been used in the medical environment (hospitals, dentists, etc.) to disinfect surgical instruments and equipment. **Did you know that disinfectants such as bleaches and even quaternary compounds are effective only if the surface to which they are applied is free of organic compounds, i.e. clean?** That heat drastically reduces their effectiveness?

That their effectiveness is measured in terms of germ reduction based on exposure to temperature (180° F being the hospital standard). So to be effective you must have a cool clean surface or you are probably wasting time and money. The Vapor System makes it simple and very cost effective to clean and control germs as it uses steam vapor in excess of 180° F!

Reduces Allergies and Respiratory Ailments

We are continually exposed to germs, viruses, and the residue from millions of very small creatures called dust mites. These tiny organisms live everywhere we do and inundate our clothes, bedding, carpets and upholstery. Contemporary research has shown that the excrement from these tiny creatures play a major role in many respiratory problems and indoor air pollution. The only way to effectively combat their presence is through the use of steam, the temperature of which is the only known way to destroy them. The Vapor System is uniquely beneficial for those who suffer from such a situation.
